DATA
MANAGEMENT

MEASURE ID: K2MISSG1

Title of Measure:

Minimum Clinically Important Difference (MCID) of Patient-Reported Outcome Measurement Information System Computer Adapted Testing Physical Function Domain (PROMIS CAT PF) in Spine Surgery Patients

National Quality Strategy (NQS) domain: Effective Clinical Care

Measure type: Outcome

Meaningful Measure Area: Patient Reported Functional Outcomes

National Quality Forum (NQF) number, if it applies: N/A

Descriptions of the denominator and numerator:

Denominator: All patients undergoing surgical procedure on spine

Numerator: Number of patients recording a minimum difference in score of PROMIS CAT PF from preoperative to minimum 6-month post-operative of +3.5.

Descriptions of the denominator exceptions, denominator exclusions:

Denominator Exceptions: Patients who fail to complete follow-up data and Patients who have not met minimum 6-month period from date of index procedure. Patients who fail to complete follow-up data and Patients who have not met minimum 6-month period from date of index procedure.

Numerator Exceptions: Patients who cannot physically complete the PROMIS CAT survey due to language or other barriers.

If the measure is risk adjusted: Not Risk Adjusted

Number of performance rates required for measures: 1

Measure Type: Outcome

High priority status: High Priority; Outcome

Traditional vs. inverse measure: Traditional

Proportional, continuous variable, outcome, and ratio measure indicator: Proportional
