

Data Management for Oracle Cloud Applications

Cloud Data Management Is Critical

Data management is crucial for any application, and often is the last thing that organizations think about. It is very important to clean and standardize data regardless of being in the cloud or on-premise because it affects possible downstream business processes, customers experiences and reporting. That is why it is critical to manage data effectively.

Deliverables

Data Management for the Cloud is a fixed fee, defined timeline solution designed to be implemented alongside your cloud application. eVerge Group will deliver a data quality solution using Oracle Enterprise Data Quality that includes data profiling to define rules that identify consistency, conformity, completeness, accuracy and duplication issues as well as development of processes that insert clean and standardized data into your cloud application. Through interactive analysis, iterative improvement and ongoing maintenance, our team will help you increase data quality to your cloud application in 6 weeks.

The solution includes:

- Installation of DEV and PROD environments (Windows Only) for EDQ
- 2 source systems
- Up to 500K records
- 25 customer and address attributes
- 15 product or asset attributes
- Data profiling and assessment
- Integration to target service cloud application
- Development and deployment of up to 5 data quality processes and 2 web services

Our Expertise

Our consultants help you create that trusted information so the business and IT can count on the data being clean, reliable and complete. They also add value by engaging business leadership to create governance processes for organizational alignment.

Every eVerge Group enterprise information management consultant:

- Communicates business value
- Demonstrates data governance expertise
- Completes training as an Information Management Professional
