## SMART DEVICE MONITOR

# Monitor and manage your TOUGHBOOK devices more proactively than ever.

The TOUGHBOOK Smart Device Monitor gives you real-time visibility into the health and utilisation of your mobile device estate. By providing intelligent, round-the-clock insight on all devices, this operational intelligence software allows you to take the right actions and resolve issues more quickly.

Smart Device Monitor gives you the most precise data on where, when and how your TOUGHBOOK devices are being used. And it gives you that data in a way that's smart but simple to understand. Millions of device events are translated into a red, amber and green operational status for the three core elements of performance outlined below.

### Our user-friendly interactive dashboard displays critical information on:

- **Device Location:** Smart Device Monitor warns you when a device is not in the location it should be, allowing staff to take immediate action to avert any permanent loss of assets.
- **User Experience:** Smart Device Monitor rapidly identifies the issues impacting user experience (including drop detection on Android™), so you can make improvements fast.
- **Asset Utilisation:** With real-time insight into how assets are used, you can make more cost-effective decisions on buying and deploying equipment and adjust capacity as business cycles change.

# KEY BENEFITS

## Minimises costs

Money is lost when you make the wrong decisions. By providing real-time insight into asset utilisation, you can work out exactly how much equipment to buy and where to deploy it for maximum cost efficiency.

## Improves productivity and performance

By identifying the issues that are impacting productivity, you can ensure you make the right decisions to improve workforce performance. Stop small issues from becoming significant problems by installing early warning systems and setting stringent thresholds for alerts and device status.

## Reduces the number of lost and stolen assets

Losing mobile devices is common. By setting alerts based on geofence parameters, your staff can take action as soon as a device is not in the right location – preventing a potentially costly loss of assets.

## Is highly scalable

Smart Device Monitor gives precise and detailed data on mobile estates of anywhere between 50 and 50,000 devices. Organisations of virtually any size can monitor and manage every device deployed in their mobile workforce.

## Works in all environments

Gain insights into and from the shop, the field, the road or the warehouse. The Smart Device Monitor benefits the overwhelming majority of sectors and workforces.

## Easy to understand insight

Don't waste time tracking and translating complex data. All analytics from the Smart Device Monitor are displayed in a simple-to-understand, cloud-based dashboard that is accessible at any time and from any location.

SKU	DESCRIPTION
CF-LESPDAEE1	1 year Smart Device Monitor software
CF-LESPDAEE3	3 year Smart Device Monitor software
CF-LESPDAEE5	5 year Smart Device Monitor software
